Optigen Accession #: **18-606**
Report issued for: **Ralph**

OptiGen Test Certificate

Optigen Accession #: **18-606**

Test Completed: **02/14/2018**
Report Issued: **02/14/2018**

Test Performed: **prcd Mutation Test for PRA**

Result: **Carrier**
Sample Type: **Blood**

Registered Name: **N/A**

Reg#: **N/A**

Breed: **Chinese Crested**

ID#: **968000010297618**

Sex: **Male**

Date of Birth: **June 20, 2015**

Owner(s):

Annika AC Carlsson

Test Results: Genotype of your dog is **CARRIER**.

Risk for developing PRA: This dog will never develop the prcd form of PRA (progressive rod-cone degeneration form of Progressive Retinal Atrophy). Note that PRA in Chinese Cresteds appears to consist of at least two different genetic defects. Because only a small number of PRA affected Chinese Cresteds have been tested so far, it is not possible to estimate the frequency of prcd-PRA among PRA affecteds of this breed. A Chinese Crested of known status for prcd-PRA could still be at risk for another, as yet unidentified form of PRA. DNA testing does not replace the value of routine eye exams.

Significance for breeding: Carrier dogs should be bred only to a mate of Normal/Clear genotype to avoid producing pups affected with the prcd form of PRA.

This interpretation is based on the test result of the DNA test for the specific mutation identified as causing the prcd form of PRA in Chinese Cresteds as of the date on this report.
